

Process & Decision Documentation

Project/Assignment Decisions

I set up my workspace for the projects and assignments I will be completing over the course of this semester. I already had Visual Studio Code installed, and have used GitHub before, but I made a student account and linked it to VSC for this class. To ensure everything was working properly, I changed the canvas background from the default (220) to white (255), and added funny text. I then made a repo and pushed changes onto it before submitting.

GenAI Documentation

No GenAI was used in this assignment.
